Subject: Case No. 6177-4 Stipulated Order for Abatement – Condition 53 Weekly Report

[EXTERNAL SENDER: Use caution with links/attachments]

All,

In accordance with Condition 53 of the Stipulated Order, Chiquita provides the following information for the week of June 10 through June 16. Chiquita is providing this information to the best of its knowledge; this information is subject to change based on further review and verification.

(1) number of tanks in each leachate tank group;

There are currently 251 leachate frac tanks at the Chiquita Canyon Landfill:

#1 Top Deck Tank Manifold: 0

#2 East Perimeter Manifold: 4

#4 LC Manifold: 1

#6 North Perimeter Manifold: 6

#7 Tank Farm: 107

#9 Tank Farm: 129

Staging area, not in use: 4

(2) total number of leachate tanks treated;

Chiquita treated 61 tanks during the weekly period. Chiquita has treated 837 tanks from February 17, 2024 (the beginning of treatment) through June 16, 2024.

(3) weekly and year-to-date total quantity of liquid collected;

Chiquita estimates that it collected approximately 1,107,926 gallons of liquid during the weekly period (not counting flare condensate). Chiquita estimates that it has collected approximately 24,678,214 gallons from January 1, 2024 to date (not counting flare condensate). Note that upon further information received from manifesting and other quality assurance review, the YTD values in this report are updated to more accurately reflect the total volume of liquids collected.

(4) weekly and year-to-date total quantity of liquid treated;

Assuming 17,000 gallons per tank, Chiquita treated approximately 1,037,000 gallons during the weekly period and approximately 16,065,000 gallons from February 17, 2024 (the beginning of treatment) to date. Note that upon further

information received from manifesting and other quality assurance review, the YTD values in this report are updated to more accurately reflect the total volume of liquids treated.

(5) estimated weekly and year-to-date total quantity of seeping, pooling, or ponding leachate collected.

Chiquita estimates less than 145 gallons of seeping, pooling, or ponding leachate was observed in the weekly period. The liquid was collected and contained and fresh dirt was added. The year-to-date estimate is approximately 170,845 gallons. These numbers are based on Chiquita's twice-daily inspections of leachate seeps/pooling and the logged estimates of the number of gallons of seeping/pooling leachate, as well as estimates of stormwater and leachate pumped from the dammed stormwater channel during storm events early in the year. This overestimates the amount of leachate collected because it includes these previously reported events where leachate seepage entered the channel and came into contact with stormwater. Note that the volume of any leachate seeps/pooling that are collected is also captured in the totals under #3, because those liquids are transferred to the frac tanks for eventual disposal.

Thank you,
