Subject: Case No. 6177-4 Stipulated Order for Abatement – Condition 53 Weekly Report

Importance: Normal

Sensitivity: None

[EXTERNAL SENDER: Use caution with links/attachments]

All,

In accordance with Condition 53 of the Stipulated Order, Chiquita provides the following information for the week of July 8 through July 14. Chiquita is providing this information to the best of its knowledge; this information is subject to change based on further review and verification.

(1) number of tanks in each leachate tank group;

There are currently 251 leachate frac tanks at the Chiquita Canyon Landfill:

#1 Top Deck Tank Manifold: 0

#2 East Perimeter Manifold: 4

#4 LC Manifold: 1

#6 North Perimeter Manifold: 6

#7 Tank Farm: 107

#9 Tank Farm: 129

Staging area, not in use: 4

(2) total number of leachate tanks treated;

Chiquita treated 39 tanks during the weekly period. Chiquita has treated 995 tanks from February 17, 2024 (the beginning of treatment) through July 14, 2024. Note that upon further review, the total values in this report are updated to more accurately reflect the total number of tanks treated since treatment began.

(3) weekly and year-to-date total quantity of liquid collected;

Chiquita estimates that it collected approximately 1,121,287 gallons of liquid during the weekly period (not counting flare condensate). Chiquita estimates that it has collected approximately 28,676,281 gallons from January 1, 2024 to date (not counting flare condensate). Note that upon further information received from manifesting and other quality assurance review, the YTD values in this report are updated to more accurately reflect the total volume of liquids collected.

(4) weekly and year-to-date total quantity of liquid treated;

Assuming 17,000 gallons per tank, Chiquita treated approximately 677,244 gallons during the weekly period and approximately 19,314,577 gallons from February 17, 2024 (the beginning of treatment) to date. Note that upon further information received from manifesting and other quality assurance review, the YTD values in this report are updated to more accurately reflect the total volume of liquids treated.

(5) estimated weekly and year-to-date total quantity of seeping, pooling, or ponding leachate collected.

Chiquita estimates less than 151 gallons of seeping, pooling, or ponding leachate was observed in the weekly period. The leachate was collected/contained by vacuuming standing liquid, removing contaminated dirt, and covering with fresh dirt, as needed. The year-to-date estimate is approximately 171,306 gallons. These numbers are based on Chiquita's twice-daily inspections of leachate seeps/pooling and the logged estimates of the number of gallons of seeping/pooling leachate, as well as estimates of stormwater and leachate pumped from the dammed stormwater channel during storm events early in the year. This overestimates the amount of leachate collected because it includes these previously reported events where leachate seepage entered the channel and came into contact with stormwater. Note that the volume of any leachate seeps/pooling that are collected is also captured in the totals under #3, because those liquids are transferred to the frac tanks for eventual disposal.

Thank you,

Amanda Froman
